GRYTHYTAN STÅLMÖBLER 130 YEARS

• GRYTHYTAN •
STÅLMÖBLER

130 years of tradition, forged in steel.

In 1895, Grythyttan's founder, Karl Lindqvist, and his friend, the blacksmith and mechanic Theodor Berg, stepped off the train in the small village of Grythytted. They carried few possessions, besides a powerful vision to start their own forge, offering first-class craftsmanship and fine steel products. Both were already skilled blacksmiths, and they soon became well-known for their excellent horseshoes and axes, which were described as 'unsurpassed in strength and sharpness.'

Grythyttan’s very first chair was, in fact, forged from horseshoe steel. In 1930, Karl’s son, Artur, spotted an advert for the Stockholm Exhibition in the newspaper. It included a picture of a German chair made from steel tubing, with just two legs rather than the usual four. Artur, who had already encountered modernism and the Bauhaus movement during a youth exchange programme in Germany for young entrepreneurs was inspired to start sketching his own model.

In order to make his chair as comfortable and relaxing as possible, Artur used spring steel for the frame. And he shaped the backrest and seat into a continuous line that followed the form of the chair’s body. The construction was innovative, with clean lines and a distinctive rocking sensation. Everyone who tried the chair claimed it was more comfortable than any garden chair they had ever sat on before. It was not only unique, but also stable and elegant.

When Artur was satisfied with his prototype, he commissioned the nearby Hellefors factory to produce a few hundred kilos of spring steel in the correct dimensions. The chair attracted great attention in the famous department store Nordiska Kompaniet’s booth at the Stockholm Exhibition.

Plenty of water has flowed under the bridge at Grythyttehed since Artur’s first garden chair was concieved. Multiple chairs, tables, stools, benches, and garden sofas have been added to the family. And you can see a few of them here. What they all have in common is their timeless design, exceptional durability and welcoming character. To this day, all Grythyttan Stålmöbler’s furniture is crafted by hand in our own factory in Bergslagen. A team of blacksmiths, machine operators, and other craftspeople ensure that every piece is finished to perfection. The steel is bent, screws are tightened by experienced hands, and every piece of wood is carefully selected. Only if the colour, quality and grain of the wood are all perfect can a plank be used in one of our chairs. This ensures a robust product that will last for generations.

Lots of children have already inherited their parents’ Grythyttan furniture, steeped in memories. Still used and loved, this furniture can be passed down to the next generation, and the next.

And every piece is a testament to the wonder of nature – a reminder of the pine-covered coastline, the ore-rich mountains and the forests which stretch all the way to the horizon.

Through our craftsmanship, we carry the torch of history into the future. Over the last 130 years we’ve refined, improved, and further developed the strength, stability and beauty of the Grythyttan Stålmöbler furniture.

The original chair has been slightly updated and is now available in several new versions. Look for Armchair A2 in the Classic series. And please, take a seat!

Craftsmanship and types of wood.

All production is still carried out by hand in the factory in Grythyttan. The steel is bent and shaped using spirit levels, trained eyes, and years of expertise.

We use only South American oak, teak, and Swedish pine with the highest environmental certifications. Each plank is carefully selected by our craftsmen. They study the colour, grain, density and appearance of the wood. No knots or cracks are allowed.

South American oak is a very stable type of wood, that's highly suitable for outdoor environments. It's also excellent for painting, giving you an exceptionally durable and hardwearing surface. When oiled, the wood is even more beautiful, ranging in colour from light amber to a darker olive shade. Teak is regarded as a valuable, high-quality wood species due to its durability, soft aroma, golden colour and durability.

All our teak comes from certified plantations in South America.

As for our Swedish pine furniture, we only use planks with vertical annual rings. When the rings follow the same direction as the short side of the furniture, there is no risk of warping. The surface also becomes harder, which in turn makes the wooden parts more stable, durable.

Thanks to this rigorous approach to quality, our furniture ages very well. Like all living materials, the wood is affected by the sun, wind, rain and moisture, and become even more beautiful over time. Look after your Grythyttan furniture and you'll certainly be able to enjoy it for many years to come, even if you leave it outside. The steel surfaces are galvanized or laquered, before the wooden parts are assembled and the quality stamp is screwed on. No two pieces of furniture from the Grythyttan factory are identical – and that's something we're proud of!

The Classic series.

The Classic series in light green. On the right, teak. Both with black base.

The Classic series in teak with black base.

The Classic series.

The iconic Classic series was first launched at the 1930 Stockholm Exhibition and is characterised by its functional design and signature rocking sensation. With furniture from the Classic Series, the result will always be stylish. Choose between three wood species: teak, South American oak, or Swedish pine. For maximum durability, all the chairs and sofas are made with solid steel frames. The teak and South American oak furniture in this series is available with both hot galvanized and powder-coated frames. The pine furniture is available with green powder-coated frames. All the wood comes from sustainably managed forests and is environmentally certified according to FSC® or the Swedish PEFC forest standard.

High Tech.

High Tech in colours Petrol, Ivory, Black and Chestnut.

High Tech.

The chair was designed by the Swedish architect and furniture designer, Nisse Strinning. Stylish and durable, it’s crafted from hot galvanized or powder-coated steel. Its white tabletops in compact laminate are water-repellent and fully weather resistant. The table stands can be removed for easy storage, while the chairs are stackable, as well as comfortable to sit on.

As of 2025, the High Tech series is available in Ivory, Petrol, Chestnut and Black.

Nisse Strinning

Nisse Strinning is considered one of the great Scandinavian architects and furniture designers. In 1949, together with his wife, Kajsa Strinning, he designed the iconic String System. In 1984, he designed the High Tech chair for Grythyttan Stålmöbler, which is now considered a style-defining design classic.

Libelle.

Libelle.

The Libelle chair was designed by the renowned Norwegian designer, Andreas Engesvik. It is fully welded for extra strength and flexibility, but nonetheless retains a light, elegant appearance. Stackable and compact, the Libelle chair is especially suitable for smaller spaces.

Andreas Engesvik

Andreas Engesvik is one of the foremost contemporary designers in Norway. Within the world of design, he has made a name for himself in everything from furniture and tableware to industrial design, with commissions for international clients such as Iittala, Muuto, Ligne Roset and Fogia. Over the years, Andreas has won numerous awards, including the Red Dot Award, the Wallpaper Design Award and the Bruno Mathsson Award.

Akleja.

Akleja.

Characterised by its organic shapes, Akleja is the result of a collaborative effort between Grythyttan Stålmöbler and the renowned Swedish designer, Jonas Bohlin. A wide backrest and slim waist are supported by sturdy legs and rounded feet, which together ensure comfort and stability. The series includes a chair and a table in untreated teak, resting on a dark grey steel tube base.

Jonas Bohlin

Jonas Bohlin is one of the most famous designers and interior architects in Sweden. His commissions include a number of legendary Stockholm restaurants, such as Riche, Teatergrillen and Sturehof. Back in 1981, he also designed the Concrete chair, which received the Excellent Swedish Design Award.

The Brewery series.

The Brewery series.

This series was inspired by the beer cafés of the late 19th-century. Thanks to their heavy, hot-galvanized frames, both the tables and chairs are very stable. For the wooden components, you can choose between oiled or white-lacquered South American oak, or untreated teak. Regardless which wood species you choose, rest assured that all our wood comes from sustainable forestry and is environmentally certified according to the FSC forest standard.

Accessories.

Grythyttan Stålmöbler offers a range of accessories to help keep your furniture looking its best. For example, practical floor protectors for the Classic and High Tech series. Or, if you’re planning to renovate old Grythyttan furniture, we provide you with replacement components in several types of wood. To learn more about our history, order the book Grythyttan Stålmöbler – The Story of a Classic Swedish Furniture Maker.

Suitable for chairs with round steel in the frame.	

Certification for responsible and sustainable forestry.

When you purchase one of our products, we believe you have the right to know where the material comes from and how it has been produced. To this end, we work with certification organisations and environmental labeling, so you can trace our materials throughout the value chain, all the way from the raw material to the finished product. The wooden components in our furniture all carry environmental certifications from one of two leading organisations, both of which share our vision for responsible forestry. This guarantees that the materials used in any products you buy from us always meet the relevant social and environmental standards.

Firstly, the teak and South American oak we use are certified by FSC®, the *Forest Stewardship Council*®. FSC is an international organisation with members from various environmental and social organisations, and economic stakeholders. Together, they strive towards making the world's forests environmentally sustainable, socially responsible, and economically viable. FSC® is the only wood product certification supported by WWF, the World Wildlife Fund. Grythyttan's licence number is FSC® C153972.

Secondly, the pine we use is certified by the *Programme for the Endorsement of Forest Certification* (PEFC). This is an international organisation of forestry companies whose members work together to promote sustainable forestry, focusing on environmental, economic and social sustainability.
