

Tubo, ash tree, bright light therapy device

Innolux Tubo is a bright light device that is suitable in many spaces. Easy placement and functionality are also the starting point behind its idea and design. Thanks to its measurements, Tubo only takes up a little space on the table, and the lamp is easily moved from one place to place. Contrasts have influenced both its design and choice of materials. Warm wood and cool, bright light go perfectly together creating a harmonic and fascinating entity. Tubo can also be dimmed from a bright light to mood lighting.

JARKKO OJA

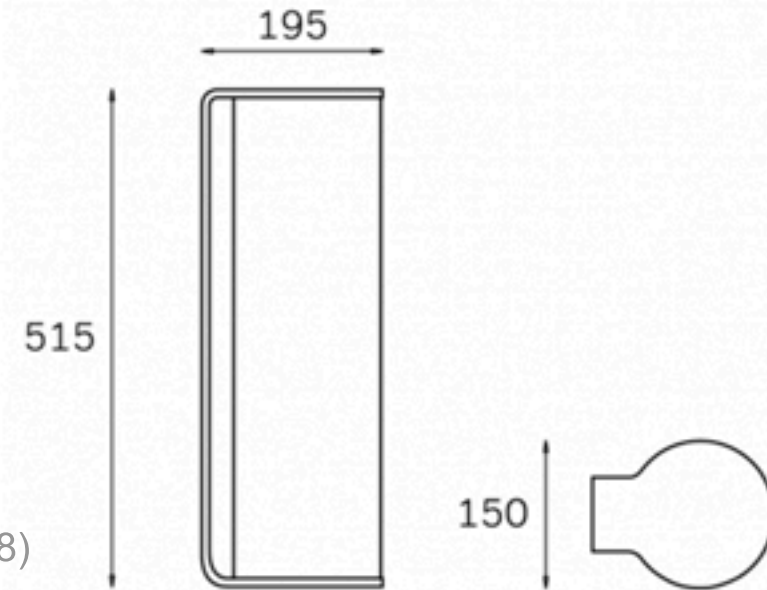

Carpenter, studying design (born 1988)
Jarkko Oja started studying design at Turku University of Applied Sciences in 2010, just after being fully qualified as a carpenter.

In his design Oja values functionality and durability. Products must be both functional and durable. They should also provide novelty value to the owners and be so prestigious that you don't want to abandon them even after a long time of use.

“The fascinating thing about wood is its pervasive elegance.”

Technical information

Size: K515, L195, S150 mm

Therapy distance: 40 cm (2500 lx), 20 cm (10 000 lx)

Power: 2×36 W TC-L

Lamp base: 2G11

Material: PMMA acrylic, birch plywood, ash veneer

IP class: IP 20

Including light source: Yes

Weight: 3,15 kg

Cord length: 2,5 m

Electronic ballast: electronic
